

OPTIMALITY CRITERIA AND DUALITY IN NONDIFFERENTIABLE CONTINUOUS PROGRAMMING AND CONTROL

by
IQBAL HUSAIN

A Thesis submitted to the
Indian Institute of Technology, Delhi
for the award of the degree of
DOCTOR OF PHILOSOPHY

Department of Mathematics
INDIAN INSTITUTE OF TECHNOLOGY, DELHI
1983

ACKNOWLEDGEMENTS

It gives me great pleasure to express my profound sense of gratitude to my supervisor, Dr. Suresh Chandra, Assistant Professor, Department of Mathematics, I.I.T., Delhi, for his able guidance and constant encouragements through the preparation of this work. I am extremely indebted to Professor B.D. Craven, Department of Mathematics, University of Melbourne, Australia, for all his help and interest in this work.

My thanks are due to the Director, I.I.T., Delhi, and the Head of the Department of Mathematics, I.I.T., Delhi for providing me research facilities.

The kindness of Mathematical Community in sending me reprints, preprints has been immense, which I gratefully acknowledge.

I am sincerely thankful to Professor O.N. Wakhlu, Principal, Regional Engineering College, Srinagar, Kashmir for his encouragement to pursue this research work and for sanctioning necessary leave etc. My thanks are also due to Professor A.R. Ansari, Head, Department of Mathematics, Regional Engineering College, Srinagar for showing interest in this research programme.

To my parents I owe more than I can possibly express, without their love and blessings I would, probably, not have succeeded in carrying out this project. I am thankful to all members of my family for helping me in every way, especially to my Children, Ayesha and Yousuf (Zafar) for their regular prayers by spreading their tiny hands before Him for His mercy and help at the time of despair and dissatisfaction.

I will be failing in my duty if I do not record my sincere regards and gratitudes to Janab, S. Iftekhhar A. Faridi, Professor Moonis Raza, Director, National Institute of Educational Planning and Administration, Professor S. Izhar Husain, Head, Department of Mathematics, Aligarh Muslim University, Aligarh, and Professor S. Nurul Hasan, Vice President, C.S.I.R. who have always taken keen interest in my academic career.

I sincerely thank all my friends, to mention a few, Dr. Tariq Aziz (A.M.U.), Mr. M.C. Tiwari (I.I.T. Delhi), Mr. P.K. Saxena (D.E.I. Agra), Mr. Pramod Kumar (D.U.), Mr. Mehdi Mortazvi (Iran), Mr. Gajender Gulati (Boston Paints), Mr. A.I.K. Adyemi (Nigeria) and Dr. Maurya (I.I.T. Delhi) for all the help and assistance that I have received from them.

Finally, I wish to express my deep appreciation to Mr. D.R. Joshi, who did an excellent typing job of this thesis.

(IQBAL HUSAIN)

This thesis entitled, "Optimality Criteria and Duality in Nondifferentiable Continuous Programming and Control" is divided into six chapters, the contents of which are given below.

The first chapter is general introduction which contains preliminaries, review of related work and a summary of the thesis.

The second chapter gives duality results for a class of continuous programming problems under weaker convexity hypotheses. These results generalize various well known results in variational problems, and also give a dynamic analogue of certain recent results on generalized concavity and duality in mathematical programming. Further, a suitable pair of continuous programming problems is constructed and symmetric and self duality results are established under weaker convexity assumptions.

In the third chapter optimality conditions and duality results are obtained for a class of continuous programming problems with a nondifferentiable term in the integrand of the objective function. These results generalize various well-known results in continuous programming problems with differentiable functions, and also provide a dynamic generalization of certain nondifferentiable mathematical

programming problems. This chapter also deals with the optimality criteria and duality results for a class of continuous programming problems with an L_p norm in the integrand of the objective functional. It is also discussed that these results, as in the previous case, can be regarded as a dynamic generalization of those of their static-counterparts in nonlinear programming problems.

The fourth chapter provides a study on symmetric and self-duality for a class of nondifferentiable nonlinear programs which combine differentiable as well as non-differentiable cases appearing in the literature. Various natural extensions are discussed. The study also includes duality and self duality for a pair of symmetric dual non-differentiable continuous programs which are regarded as a dynamic generalization of the earlier problems of this chapter.

The fifth chapter deals with optimality conditions and duality for a class of control problems having a non-differentiable term in the integrand of the objective functional - the nondifferentiability entering in the control vector. These results generalize various well known results in optimal control theory with differentiability and also present a relationship with certain nondifferentiable

mathematical programming problems. Further a unified treatment of optimal control theory and continuous programming are mentioned.

In chapter six, the last chapter of the thesis, optimality conditions and duality results are obtained for a class of continuous nondifferentiable **fractional** programming problems. These results generalize various well known results in continuous fractional programming and also give a dynamic generalization of certain class of nondifferentiable fractional programming problems.

CHAPTER		PAGE No.
I	INTRODUCTION	1
	1.1 Preliminaries	3
	1.2 Review of Related Work	9
	1.3 Summary of the Thesis	22
II	GENERALIZED CONCAVITY AND DUALITY IN CONTINUOUS PROGRAMMING	
	2.1 Primal and Dual	32
	2.1.1 Duality Aspects	34
	2.1.2 Converse Duality	37
	2.1.3 Related Problems	42
	2.2 Symmetric and Self Dual Continuous Programming Problems	45
	2.2.1 Duality Aspects	46
	2.2.2 Self Duality	52
	2.2.3 Related Problems	55
III	A CLASS OF NONDIFFERENTIABLE CONTINUOUS PROGRAMMING PROBLEMS	
	3.1 Nondifferentiable Continuous Programming Problems	59
	3.1.1 Conditions Necessary or Sufficient for Optimality	61
	3.1.2 Duality	69
	3.1.3 Converse Duality	71
	3.1.4 Related Problems	75
	3.2 Nondifferentiable Continuous Programming with an L_p in the Integrand	78
	3.2.1 Necessary and Sufficient Conditions	79
	3.2.2 Duality	86
	3.2.3 Converse Duality	89
	3.2.4 Related Problems	95

IV	SYMMETRIC AND SELF DUALITY IN NONDIFFERENTIABLE NONLINEAR AND CONTINUOUS PROGRAMMING	
4.1	Symmetric Dual nondifferentiable programms	99
4.1.1	Symmetric Duality	100
4.1.2	Self Duality	106
4.1.3	Special Cases	108
4.1.4	Certain Extensions	109
4.2	Symmetric Dual nondifferentiable Continuous Programming Problems	112
4.2.1	Symmetric Duality	113
4.2.2	Self Duality	122
4.2.3	Related Problems	126
V	DUALITY FOR A CLASS OF NONDIFFEREN- TIABLE CONTROL PROBLEMS	
5.1	Nondifferentiable Control Problems	131
5.2	Abstract Version of a Nondifferen- tiable Control Problem	133
5.3	Necessary and Sufficient Optimality Conditions	134
5.4	Duality	140
5.5	Converse Duality	143
5.6	Related Problems	148
5.7	A Unified Approach	149
VI	CONTINUOUS NONDIFFERENTIABLE FRACTIONAL PROGRAMMING PROBLEMS	151
6.1	Primal and Dual Problems	152
6.2	Necessary and Sufficient Conditions	154
6.3	Duality	163
6.4	Converse Duality	166
6.5	Related Problems	172
6.6	An Extension	174b
